

NEUROWAVE MEDICAL TECHNOLOGIES™ REINTRODUCES RELIEFBAND® MEDICAL DEVICE INTO MARKET

Chicago, IL -- Neurowave Medical Technologies™ (NMT) reinstated the production and distribution of the ReliefBand® Medical Device in September 2008. In 2007, Neurowave Medical Technologies™ acquired the global rights, corporate assets, technology, trademarks, and intellectual property from Woodside Biomedical, Inc., the former producers of the ReliefBand® Medical Device.

The ReliefBand® Medical Device was discontinued in 2004, and Neurowave Medical Technologies™ saw the opportunity to re-brand the popular and effective device and bring it back with enhanced and improved technology. Under Neurowave Medical Technologies™, the “non-invasive” and “non-drug” ReliefBand® technology is currently targeted to treat and relieve nausea and vomiting (NV) in four (4) distinct areas: chemotherapy-induced NV, pregnancy-induced NV (more commonly referred to as morning sickness), post-operative NV, and motion sickness.

The ReliefBand® Medical Device is currently available on a prescription basis, and NMT is currently pursuing various licensing and business development ventures with major corporations.
